

INON offers wide selection of strobe arm products to adjust strobe distance and its angle for creative and sophisticated lighting to suit to your camera, subject and shooting style.

●Easy & Steady Lighting●

Once INON D-2000/Z-240/S-2000 receives built-in flash light from combined digital camera, the strobe needs to be properly aimed at a subject. However unstable condition underwater could make this rather difficult and we never have same situation since subject and environment alternates continuously. Lovely scene or subject doesn't wait until you are ready. So Strobe Arm is an essential photographic equipment not to miss the perfect shot.

Setup Example

Shoot with Easy Handy system

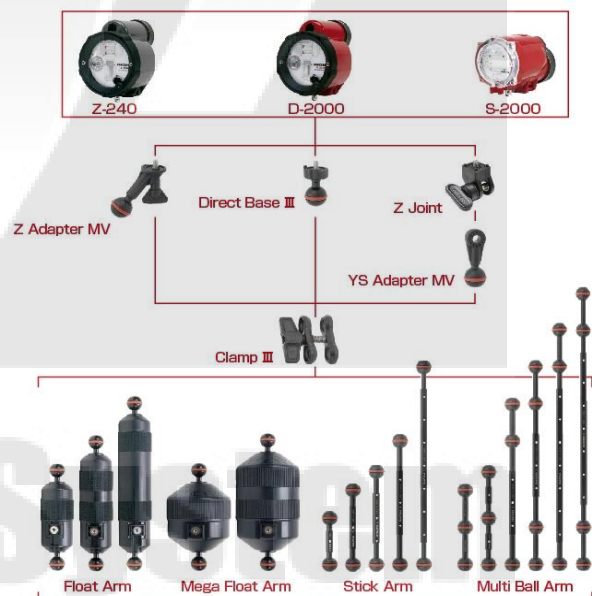

Single strobe set to start external strobe shooting easily

Shoot with Multiple Lighting system

Expands compact digital camera system with extended arms or multiple strobes

Expandable optional accessories reliably support digital SLR housing

Shoot Video in Bright Light

Wide variety of accessories to use vital LED flashlight for videography
